

Disposal of electrical and electronic equipment

The crossed-out wheeled bin means that you are obliged by law to dispose of this equipment separately from the unsorted municipal waste collection system. Disposing of it in the residual waste bin or the yellow bin for recyclable materials is prohibited. If the product contains one-way batteries or rechargeable batteries that are not permanently installed, these must be removed before disposing of the product and be disposed of separately as batteries.

Collection of batteries and lamps

If the products contain batteries and rechargeable batteries or lamps that can be removed from the old device without destroying it, these must be removed before disposal and disposed of separately as batteries or lamps. The following batteries are contained in our MFP/printers: Battery type button cell with the chemical element lithium.

Options for returning old devices

Owners of old devices can return them free of charge within the scope of the possibilities for the return or collection of old devices set up and available by public waste management authorities, so that proper disposal of the old devices is ensured. In addition, the return of old devices is also possible with distributors under certain conditions. The following link provides an online directory of collection and take-back points: <https://www.ear-system.de/ear-verzeichnis/sammel-und-ruecknahmestellen>

For distributors: The take-back must be free of charge with the purchase of a similar new device. (1:1 take-back) Irrespective of this, it is possible to return the old devices to the distributor free of charge. The prerequisite for this is that the external dimensions do not exceed 25 centimetres and the return is limited to three old devices per type of appliance (0:1 take-back).

Retailers: Distributors with a sales area for electrical and electronic equipment of at least 400 square metres are obliged to take back WEEE. Also obliged to take back are food retailers who have a total sales area of at least 800 square metres and who also offer and make available on the market electrical and electronic equipment several times in a calendar year or on a permanent basis.

Distance selling markets: Distributors who sell their products using means of distance communication are obliged to take back WEEE if the storage and shipping areas for electrical and electronic equipment are at least 400 square metres.

Data protection

We should point out to all end-users of waste electrical and electronic equipment that they themselves are responsible for deleting all personal data from the waste electrical and electronic equipment to be disposed of.

WEEE registration number

We are registered as a manufacturer of electrical and/or electronic equipment with registration number DE 73145443 at stiftung elektro-altgeräte register, Nordostpark 72, 90411 Nürnberg.

Collection and recovery quotas

Under the WEEE Directive, EU Member States are obliged to collect data on WEEE and to transmit this data to the European Commission. You can find more information on this on the BMUV website (German only).

Additional information for commercial customers

In the case of B2B devices (devices that are used in other than private households), TA Triumph-Adler is obliged to provide the financial and organisational resources for disposal. In the event that the devices are defective, the end user has the option of returning them to us or having them returned and/or contacting our disposal partner directly.
