aQrate

Enjoy the utmost security

The aQrate software solution from UTAX allows you to monitor and control your scanning, copying and printing processes more efficiently throughout the entire company. Your sensitive data will always be protected thanks to high security standards and cutting-edge identification technologies. Clearly laid-out reports will ensure that you are always able to enjoy an overview of your processes and keep everything under control.

Save all print jobs in one central location

Home directory, e-Mail, server

MFP

Whether you're scanning using a multifunctional system (MFP) or sending out print jobs from your workstation or a mobile device – **aQrate** manages all your processes from one central point. They will only be approved for further processing after prior authentication by the user, or saved in a personal mailbox or directory if you are scanning documents.

How is data security guaranteed?
The user logs into the output device using a **PIN or password, a transponder or by smartphone via Bluetooth.** This can be expanded with **two-factor authentication if necessary.** Printouts no longer end up in the wrong hands.

How exactly is controlling supported?
The software solution offers **a wide array of clear analysis options.** These allow costs to be clearly categorised, and existing resources to be better used to capacity. This ensures **greater cost transparency and improved controls overall.**

More about the functions and advantages

Convenient, flexible, simple: scanning and printing made even more secure.

The main advantages for users at a glance:

▶ Convenient – thanks to **the individually adaptable user interface** and 'one-button' operation for the most important functions.

▶ Print jobs sent from a computer, tablet or smartphone can be collected at any multifunctional system or printer. Scanned documents can be sent to **any output location** (e.g., user directory, e-mail address or server).

▶ High security for data and documents, thanks to **user identification** directly on the multifunctional system and **data encryption** until the document has been printed.

▶ Expansion of the range of functions, with adaptation to the **specific workflow requirements** possible at any time.

And the most important advantages for the administrator:

▶ **Simple administration** and user-friendly web interface.

▶ **User-defined scanning profiles** are simple to create, which makes the workflow significantly more straightforward.

▶ Defined **user roles and print policies** allow direct access to copying and scanning features.

▶ **Printer drivers are installed automatically.**

▶ **Fewer support requests** thanks to an intuitive control panel on the output device.

SYSTEM REQUIREMENTS

▶ HyPAS™-enabled multifunctional system

▶ **Operating system:** Windows Server 2012/2012 R2/2016/2019/2022 with latest updates Updates, only 64bit operating systems are supported. Microsoft .NET Framework 4.7.2 full version or higher

▶ **Processor:** Quad Core 2 GHz (recommended*)

▶ **Memory:** 8 GB RAM (recommended*), 6 GB (minimum)

▶ **Storage space:** 350 GB (recommended*), 30 GB (minimum)

▶ **Desktop Client operating system:** Windows / Linux / Mac OS / SAP and other ERP systems supporting LPR

*up to 100 devices
